- |                 |               |              |              |              |
|-----------------|---------------|--------------|--------------|--------------|
| • React.js      | • HTML        | • Jira       | • Django     | • MongoDB    |
| • Javascript    | • CSS         | • Confluence | • Flask      | • PostgreSQL |
| • Python        | • TypeScript  | • Git        | • Express.js | • MySQL      |
| • Ruby on Rails | • Node.js     | • Bitbucket  | • Angular.js | • Cassandra  |
| • Jest          | • AWS Amplify | • Figma      | • Bootstrap  | • Enzyme     |

## Professional Experience

---

### StayBizze

Software Engineer

January 2023 - present

- Experienced React Developer proficient in utilizing the useReducer hook for state management throughout entire applications. Skilled in leveraging AWS Amplify to securely store signup data in databases. Passionate about building minimum viable products (MVPs) and ensuring their successful launch.

### ChopDawg.com

Software Engineer

July 2022 - December 2023

- Implemented Atlassian's suite of tools, including JIRA, Confluence, and Bitbucket, to create a comprehensive development environment and documentation for new team members, resulting in a smoother onboarding experience and increased productivity.
- Developed critical React functions to launch the Minimum Viable Product (MVP), including implementing dynamic user interfaces, integrating with APIs, and enabling smooth user interactions, resulting in a successful product launch and positive customer feedback.

### DEFINFTly\_Consulting

FullStack Developer

June 2022 - December 2022

- Developed a cutting-edge web3 platform aimed at generating liquidity through NFT consignments.
- Collaborated closely with the designer to implement UX and UI enhancements, ensuring seamless user experiences.
- Translated Figma designs into code using CSS and JSX, effectively bringing the platform's visual appeal and functionality to the client side.
- Implemented various features, including signin with Ethereum, connect Metamask wallet.
- Utilized React.js and Next.js to optimize performance and user engagement.
- Worked in a startup centric environment, coordinating with backend stories and product owners to achieve project goals.

**Nexient**

Developer 1

August 2019 - October 2020

- Assisted in the development of an internal React.js project, leveraging Jest testing framework to ensure code quality and improve reliability, while creating reusable components to enable faster development and efficient maintenance. Incorporated Hooks, such as useState, to implement various data states throughout the application, and used Material-UI to deliver MVP in four two-week sprints, resulting in a successful launch and positive team feedback.

**Owl Logistic**

Software Developer

January 2017 - July 2019

- Created application to help CNJ Pest Management enhance web presence, in order to continue growing online.

## Education

---

**Coding Dojo**

Software Development

- Software Development fundamentals: Algorithms, HTML , CSS
- Python, virtual environment, Flask, MySQL, Django.
- MEAN, Node.js setup, Express.js server creation, Angular.js data passing from front end to back end, MongoDB database usage.
- Ruby on Rails virtualenv setup and usage, file system setup, scaffolding, finding and using gem, PostgreSQL data storage and .yml setup.

**New York City Technical College**
